Good Manufacturing Practice

Good Manufacturing Practice (GMP) (sometimes it is referred to as cGMP, where c is for current, indicating that the guidelines used are the current FDA guidelines) is a system for ensuring that products are consistently produced and controlled according to quality standards. It is designed to minimize the risks involved in any over-the-counter production that cannot be eliminated through testing the final product.

GMP covers all aspects of production from the starting materials, facilities, and equipment to the training and personal hygiene of staff. Detailed, written procedures are essential for each process that could affect the quality of the finished product. There must be systems to provide documented proof that correct procedures are consistently followed at each step in the manufacturing process - every time a product is made.

GMP compliance is widely-accepted as the best way to conduct business, putting product quality first.

Therefore, we have prepared a statement of cGMP of Omega Tech Labs, Inc. Boise, Idaho, USA.

To whom it may concern:

Omega Tech Labs, Inc. of Boise, Idaho USA does attest that we, to the best of our abilities and knowledge, do practice and put into effect cGMP of USFDA.

We are an inspected and compliant manufacturing facility of OTC topicals.

We comply with all observations and warnings from the USFDA.

SOPs (standard operating procedures) are in place to facilitate cGMP compliance.
